## FACTORY ACCESSORIES

Tech \& Style pack
Extended traffic sign recognition
Reversing camera with dynamic guide lines
Keyless locking
Electric tailgate with hands free function
Navigation system
Wireless smartphone charging (Qi standard)
ADAS pack
Active cruise control
Driving line assistant
Security alarm
Cross-traffic warning when reversing
Electrically folding exterior mirrors
Approach lights in exterior mirrors
$360^{\circ}$ parking radar
Remote lighting control
Automatically dimming interior mirror
Tech \& Style pack
LED headlights with projector technology
LED backlights
LED fog lights with cornering light function
18 " alloy wheels
Tinted rear windows
Dashboard mood lighting
Welcome ja good bye lights

The information contained in this brochure reflects the technical characteristics of the vehicle at the time of publication.
Jeep reserves the right to change prices, specifications and equipment without prior notice.
The consumption figures for the car models have been measured by an independent test institute in accordance with EU legislation (WLTP). The consumption figures are intended for comparison between different car models. They are based on a measurement that simulates average driving and cannot accurately reflect the consumption of a car in traffic, depending on the case and driving style. The CO2, mileage and consumption figures given in the price list and technical information are specific to each car unit and may vary. The CO2 emissions, mileage or fuel consumption of a vehicle may also be affected by factory options. The certificate of conformity of the vehicle unit being traded includes the $\mathrm{CO2}$ value, fuel consumption data and, in the case of electrified power lines, the electric range.

In practical driving situations, the energy or fuel consumption and operating distance of a car are influenced by factors such as the proportion of electric driving, charging, the driver's driving style, driving speed, temperature, preheating, weather and driving conditions, loading and maintenance. As a result, consumption and operating distance may vary significantly from the values indicated. For example, if the car is used at high speeds to tow a trailer or in cold winter conditions for short journeys without pre-heating, its consumption may be several times higher than the declared consumption. Not charging can also shorten the life of the traction battery.

Electric and hybrid cars incorporate new technologies and features that may have limitations in their use and operation compared to an internal combustion engine car. These may include high driving speeds, sequential charging or use in hot or cold conditions. Restrictions are used, for example, to protect vehicle technology. For information on how to use and store your car, please refer to your car's specific owner's manual.

In an electric or hybrid car, the capacity of the traction battery used as a source of energy is reduced by natural wear and tear. Battery capacity and durability are affected by factors such as ageing, mileage, usage pattern and charge level.

 warm driving conditions.
